Celebrating
23 years
in the trade

Celebrating 23 Years in the Trade

In 1990 two brothers, Chris, a gas engineer now with over 30 years of experience and Ian, a skilled sheet metal worker, combined their expertise and opened a retail outlet in Liverpool selling fires made by Ian to be then installed by Chris.

Over the years Crystal Fires have worked with the British Gas Testing House for their product development, approvals and licensing and have gone from strength to strength, winning awards on the way for their original innovative designs.

23 years on Crystal Fires are one of the market leaders due to an extensive range of contemporary and traditional Living Flame gas fires, always with the main focus on build quality and product efficiency. This is demonstrated in abundance with the release of their new glass fronted Manhattan and Miami hole in the wall fires.

Directors quote;

"We have gone from retailing in Liverpool out of a small fireplace showroom to manufacturing in an extensive factory overlooking the historic Aintree Racecourse, supplying our fires to retailers nationwide. Fireplace showrooms like to sell our fires because they know that every single Crystal Fire has been designed, manufactured, assembled, tested and packed entirely by ourselves in Great Britain, and that is why we can confidently offer our Five Year Guarantee."

Fuel Beds, Flue Types

Pictures shown for reference only, fuel beds may differ in appearance throughout the range.

Coal

Chimney - Class 1

A conventional brick or stone chimney as used for a solid fuel appliance, with a minimum effective cross section dimension of 225x225 with a minimum of 3m effective height.

Or

A lined flue with a minimum diameter of 175mm.

Log

Class 2

A recessed flue box, having a minimum diameter of 125mm and a minimum effective overall height of 3m.

Or

A brick chamber in an existing brick or stone chimney with a 125mm flue liner providing it is sealed at the top and bottom of the existing stone chimney.

Campfire

Pre - Cast Flue

A precast flue with a minimum effective height of 3m. Due to the restricted depth of precast flues they are normally suitable for shallow fires.

Example: Diamond, Slimline and Sapphire.

To bs1289

Pebbles

Remote Control

Variable flame height control for operation in total comfort.

Trim Top Control

The trim switch, located on the side of the appliance makes operating your appliance even easier. The fire can also be operated manually, should the need arise.

ODS

Modern gas fires are fitted with an O.D.S. (Oxygen Depletion Sensor).

This is designed to shut off the gas supply to the burner in the event of oxygen levels becoming too low, due to a blocked flue or poor ventilation.
